Indiana Site Certified Program

Threshold				
Documentation Needed	Silver	Gold	Prime	
Size of site		Minimum of 20	Minimum of 30	
	None	contiguous acres	contiguous acres	
Distance to highway		5 miles from state	2.5 miles from	
		highway	state highway	
	None	transportation	transportation	

A. Community Support (Executive-Level Local Government Official Support)				
Documentation Needed	Silver	Gold	Prime	
Letter from Chief Elected Official	Yes	Yes	Yes	
Letter from Applicant with summary of qualification of				
site for shovel ready program	Yes	Yes	Yes	

B. Site Ownership/Control (Clear Title or Development Option)				
Documentation Needed	Silver	Gold	Prime	
Letter from property owner/option holder stating that site				
is for sale/lease. Letter signed by property owner				
stating: 1) Unequivocal willingness to transact with any				
legal party/developer, 2) Person is legal owner with full				
authority to transact, 3) Price OR Current real estate				
listing agreement may substitute for letter OR Copy of				
option agreement	Yes	Yes		
LUG, LEDO, or REDO must own the property or have				
option agreement with property owner			Yes	
Fifty-year title search including: 1) Copies of results and				
findings 2) Letter stating time period covered in search				
	Yes	Yes	Yes	
Title and encumbrance report	Yes	Yes	Yes	
Copies of current property tax records	Yes	Yes	Yes	

Local Zoning Ordinances (Identification of current zoning & proof of special taxing district				
Documentation Needed Silver Gold Prime				

Official letter from local zoning official providing proof of adopted ordinances and permitted uses of site	Plan to discuss how site will overcome lack of		
		Van	V
	zoning	Yes	Yes
Highlight excerpts from adopted zoning ordinance		Yes	Yes
Relevant portion of zoning map		Yes	Yes
Narrative with a map of land use descriptions of			
adjacent properties	Yes	Yes	Yes
Menu of tax incentives available identified			Yes

D. Maps (Identification of boundaries & infrastructure)				
Documentation Needed	Silver	Gold	Prime	
ALTA survey	Yes	Yes	Yes	
Site map Showing site layout and location	Yes	Yes	Yes	
Topographical map using LIDAR	Yes	Yes	Yes	
Aerial Map	Yes	Yes	Yes	
Plat map showing site (if site is platted)	Yes	Yes	Yes	

E. Environmental				
Documentation Needed	ISR-Silver	ISR-Gold	Prime	
100-year flood plain map of site and environs. (To be				
provided by FAST Team)	Yes	Yes	Yes	

1) Soil Borings/ Geotechnical Study a) Geotechnical Report conducted by a Soil Engineer and supporting information based on the following standards: i) Brief summary highlighting relevant report sections of Geotechnical Study (1) Sample soil borings on soil conditions and stability taken at the site, burying capacity (2) Identify soil type at site (3) Exact number of soil borings will be based on the site's acreage meeting the requirement of one soil boring for every ten acres of land (4) 20 feet is the accepted minimum depth for soil borings or auger refusal ii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting plocation and depth of soil borings or auger refusal iii) Map to scale depicting plocation and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and depth of soil borings or auger refusal iii) Map to scale depicting location and	1) Cail Davings/Castachnical Ctudy			
and supporting information based on the following standards: i) Brief summary highlighting relevant report sections of Geotechnical Study (1) Sample soil borings on soil conditions and stability taken at the site, burying capacity (2) Identify soil type at site (3) Exact number of soil borings will be based on the site's acreage meeting the requirement of one soil boring for every ten acres of land (4) 20 feet is the accepted minimum depth for soil borings or auger refusal ii) Map to scale depicting location and depth of soil borings iii) Brief summary highlighting any known risk factors including seismic vibration/activity, fault lines, sink holes or past undermining iv) Copies of all reports data and/or documentation Inclusion of mapping of the site to verify seismic hazard %g for 2% in 50 years peak ground acceleration (PGA). Phase I report and supporting information based on ASTM standards E 1527-13. Any materials and records requested Appendix III. Including 1) Brief summary highlighting relevant report sections of Phase I, 2) Copies of all reports, data and/or documentation, brief summary regarding Phase II (if relevant), 3) Brief summary regarding Phase II (if relevant), 3) Brief summary regarding Phase II (if relevant), 3) Brief summary regarding hosen contaminants (if relevant) Disclosure Document. Phase I Report following the identification of a Recognized Environmental Assessment. Includes collection of soil samples and/or groundwater and surface water. Only required if the Phase I Environmental Assessment. Includes collection of soil samples and/or groundwater and surface water. Only required if the Phase I Environmental Assessment includes collection of soil samples and/or groundwater and surface water. Only required if the Phase I Environmental Assessment includes collection of soil samples and for groundwater and surface water. Only required if the Phase I Environmental Assessment includes collection of soil samples and/or groundwater and surface water.				
standards: i) Brief summary highlighting relevant report sections of Geotechnical Study (1) Sample soil borings on soil conditions and stability taken at the site, burying capacity (2) Identify soil type at site (3) Exact number of soil borings will be based on the site's acreage meeting the requirement of one soil boring for every ten acres of land (4) 20 feet is the accepted minimum depth for soil borings or auger refusal ii) Map to scale depicting location and depth of soil borings iii) Brief summary highlighting any known risk factors including seismic vibration/activity, fault lines, sink holes or past undermining iv) Copies of all reports data and/or documentation Inclusion of mapping of the site to verify seismic hazard %g for 2% in 50 years peak ground acceleration (PGA).
